

Ronnie Spencer

517-348-8117 | ronnie.spencer23@kzoo.edu | [linkedin.com/in/ronnie-spencer](https://www.linkedin.com/in/ronnie-spencer)

TECHNICAL SKILLS

Languages | Python, Java, JavaScript, SQL, HTML, CSS

Frameworks & Libraries | FastAPI, SQLAlchemy, Pydantic, Jinja2, Node.js

Developer Tools & Platforms | Git/GitHub, Docker, VS Code, Linux, Alembic, PostgreSQL, n8n Automation Platform

Concepts | REST API Design, JWT/OAuth2 Authentication, Relational Database Design, Async Programming, Debugging

WORK EXPERIENCE

Software Developer Intern

Jan 2026 – Mar 2026

Kalamazoo Valley Community College

Kalamazoo, MI

- Architected a modular FastAPI backend with 4 RESTful routers delivering structured CRUD endpoints for a campus-wide crime log and incident management system
- Designed a normalized PostgreSQL schema (Cases, Officers, Buildings, Incident Types) with enforced primary/foreign key constraints
- Integrated SQLAlchemy ORM for relational modeling and core business logic across the application
- Documented and validated APIs using OpenAPI/Swagger UI to ensure schema accuracy, endpoint reliability, and maintainable API contracts
- Collaborating with a Systems Analyst/developer to gather requirements, define database architecture, and deliver iterative backend milestones under deadline constraints

Workflow Automation Intern

Jun 2025 – Aug 2025

SalesSpaice GmbH

Remote

- Designed and built automated workflows using the n8n visual automation platform, integrating multiple third-party APIs for data flow, scheduling, and error handling
- Developed custom scripts and logic nodes to extend workflow functionality beyond native platform capabilities
- Authored a Repeatable Process Guide to standardize automation development practices across the team
- Collaborated with senior developers through code reviews and debugging sessions, gaining hands-on experience in RESTful API design and JSON data management

PROJECTS

FastAPI Blog Platform | FastAPI, PostgreSQL, SQLAlchemy, Docker

Jun 2026 – Present

- Architected a full-stack asynchronous web application (FastAPI, SQLAlchemy 2.0, PostgreSQL) as a Senior Individualized Project, exposing RESTful APIs for authentication, content, and user management
- Implemented JWT-based authentication (OAuth2 password flow) with Argon2 password hashing and a secure, token-based password-reset flow delivered via async SMTP
- Designed a normalized relational schema with enforced primary/foreign key constraints and managed schema evolution using Alembic migrations
- Containerized the application with a multi-stage Docker build and non-root runtime user; implemented security headers middleware and centralized error handling

EDUCATION

Bachelor of Arts in Computer Science

Anticipated June 2027

Kalamazoo College

Kalamazoo, MI

- NCAA Division III Student-Athlete – Football (2023–Present)
- Relevant Coursework: Object-Oriented Programming (Java), Data Structures, Design & Analysis of Algorithms
